

BACTERIAL AND VIRAL BIOINFORMATICS RESOURCE CENTER

OVERVIEW

AUGUST 23, 2022

AGENDA

- BV-BRC Overview Presentation – 10 Mins
- BV-BRC Website Tour – 20 Mins
- Case Study: Crimean-Congo Hemorrhagic Fever comparative genomics – 25 Mins
- Q and A / Discussion – 5 Mins

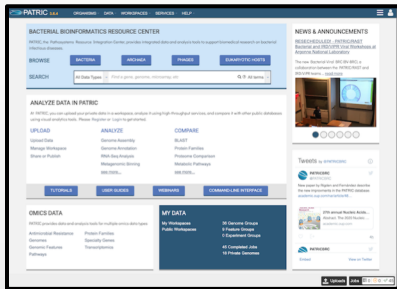

BV-BRC MISSION

- **To provide a one-stop-shop for data about human pathogenic bacteria and viruses integrated into a scalable resource for comparative bioinformatics, large-scale integrative data mining, multi-scale systems biology exploration, and machine learning that will support the evolving needs of the infectious disease research community and serve as a paradigm for research data resources**

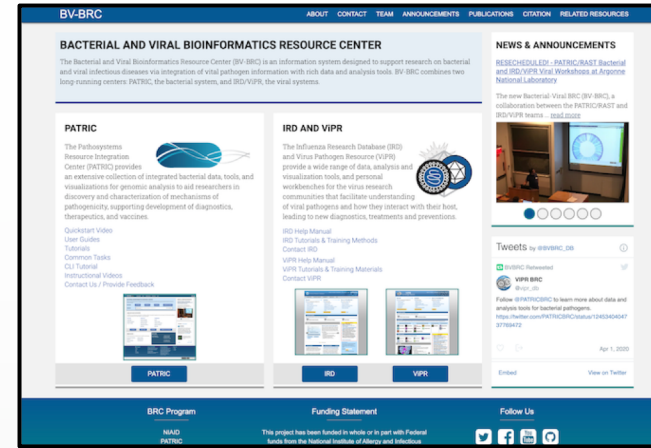

NIAID BIOINFORMATIC RESOURCE CENTERS (2019-2024)

Viruses:
IRD/ViPR
Northrop, JCVI

Bacteria:
PATRIC
UChicago, VT

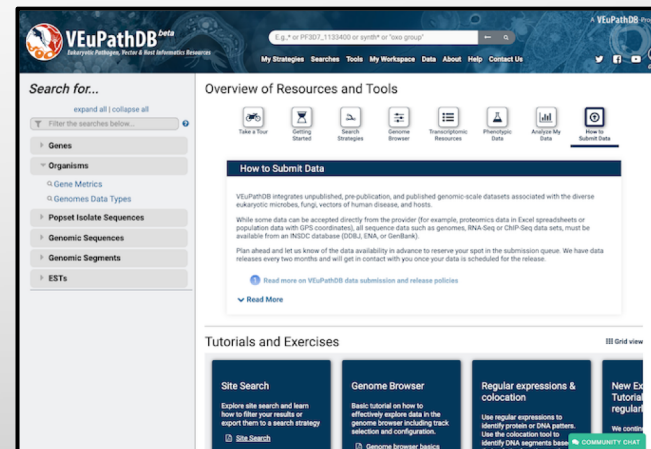

Bacteria and Viruses:
BV-BRC
UChicago, JCVI, UVA

Eukaryotes:
EuPathDB
UPenn, UGA

Vectors:
Notre Dame
EBI/EMBL

Eukaryotes and Vectors:
VEuPathDB
UPenn, UGA
Notre Dame, EBI/EMBL

KEY FEATURES

- Supporting diverse **bacterial and viral communities**
- **Unified data model** and **real-time data integration** processes
- Efficient data management to **support exponential growth** of pathogen data
- **Consistent and accurate genome annotations** and other derived data types
- Automated and manual **curation of metadata**
- Modular, interoperable, and compute-intensive **high-throughput data analysis services**
- Integrative **analysis of multi-omics systems biology data** using visual analytics tools
- Phylogenomic/epidemiological analysis for **rapid outbreak response**
- **Explainable AI / machine learning** based tools
- **Private user workspaces** for data analysis, sharing, and publishing
- **Programmatic and batch access** via APIs, Command-line Interface (CLI), and FTP
- **Outreach and education** using online tools and in-person workshops

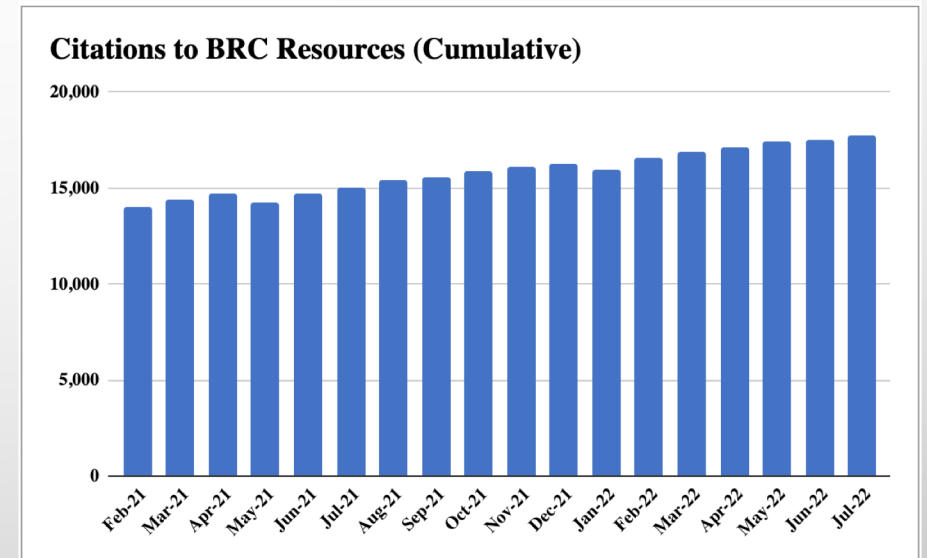

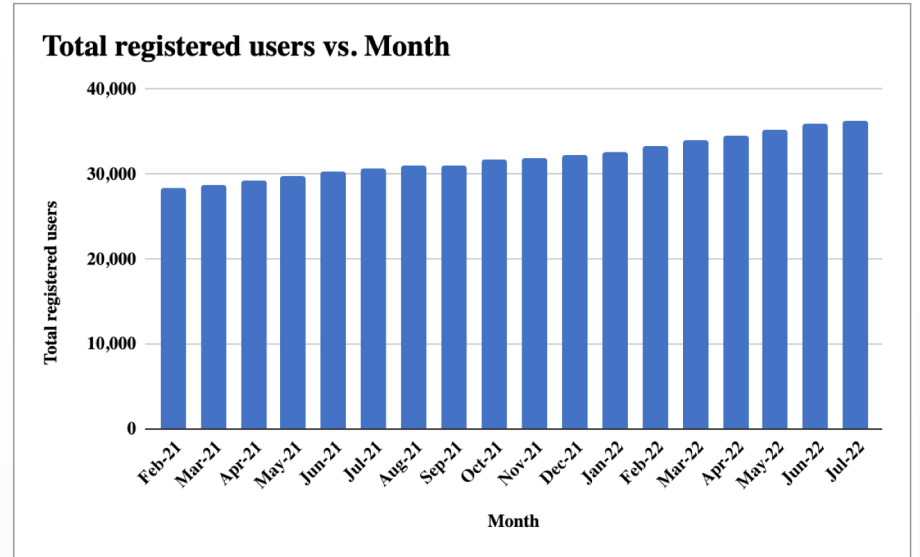

INTERNATIONAL USER COMMUNITY

BV-BRC User Community

- **32,000+** Registered users
- **40,000+** Unique visitors per month
- **16,000+** Citations

Diverse User Base

- Basic ID researchers / biologists
 - Academia, Govt labs, Non-profit, Industry, Pharma
- Clinical researchers
 - Clinical microbiologists, physician scientists
- Epidemiologists
- Bioinformatician and computational biologists
- Data scientists
- Other data resource providers

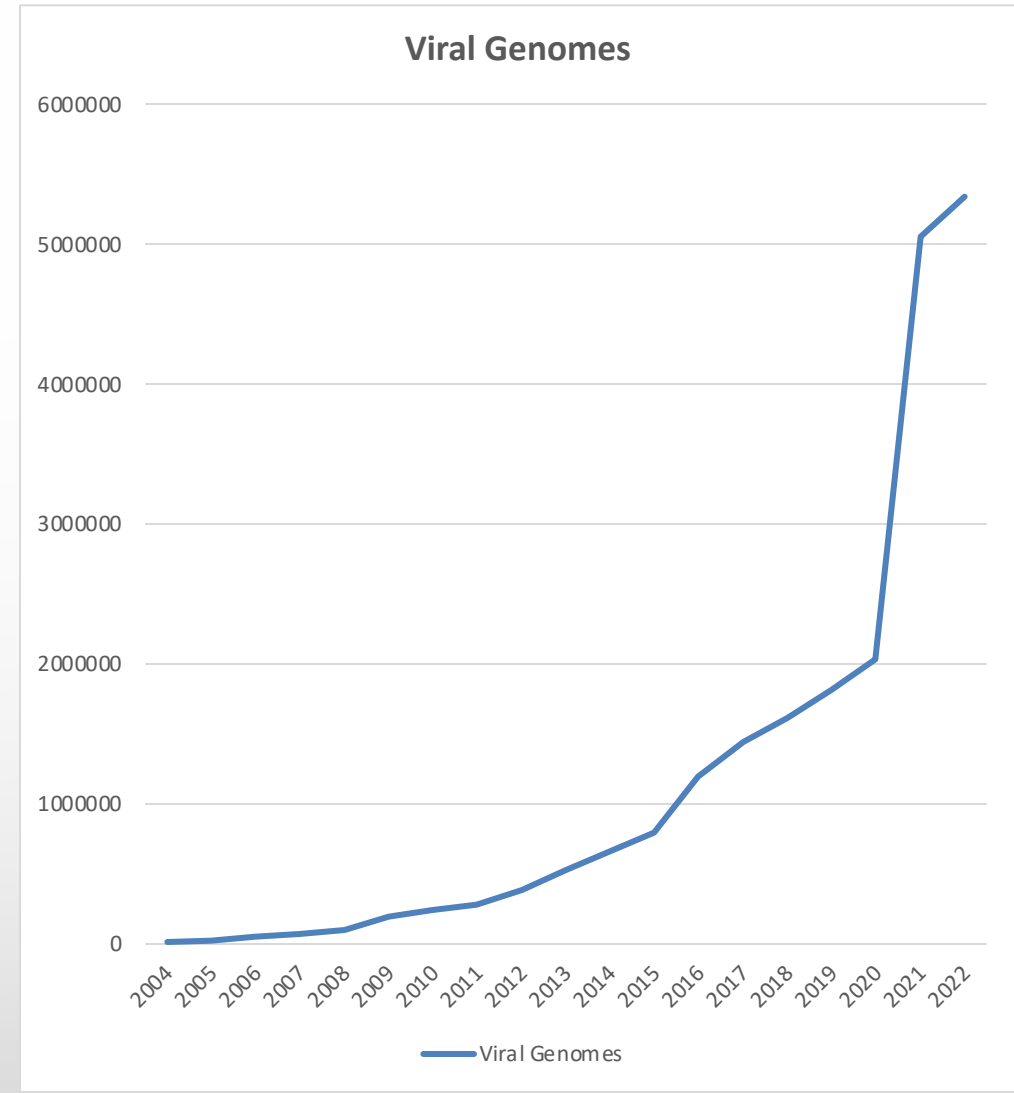

BV-BRC DATA

- **Total 9.0M+ microbial and viral genomes**
 - 8.0M+ viral genomes, including 6.2M SARS-CoV-2
 - 17K+ bacteriophage genomes
 - 10 eukaryotic host genomes
- **Uniform annotations across all genomes using VIGOR4 for viruses**
 - **111M+ genes/proteins/mat peptides**, and other genomic features
 - Protein functions, GO terms, EC numbers, protein families, domains and motifs
- **Curated metadata**
 - Host, collection date, geo location, other clinical and env metadata
- **220K+ experimentally characterized viral epitopes**
- **11.5K+ viral protein structures**
- **900+ curated Omics datasets**
 - 6500+ curated biosets from differential expression analysis
 - 111 host response datasets from bacterial and viral infections
- **56M+ microbial and host-pathogen PPIs**
- **1.6M surveillance and 47K serology records**

Data Sources

- Data aggregated from **Public Archives**
- Data from **NIAID Programs**, e.g., CEIRS, SysBio, functional and structural genomics programs
- **Derived Data** from internal pipelines
- **Data Integration**
- **Private Data** in user workspace

GENOME GROWTH

BV-BRC SERVICES

Genomics Analysis

- **Genome Assembly**
- **Genome Annotation**
- Comprehensive Genome Analysis
- SARS-CoV-2 Genome Assembly and Annotation
- Similar Genome Finder
- **BLAST**
- Phylogenetic Tree
- **Genome Alignment**
- **Primer Design**
- Variation Analysis

Gene/Protein Analysis

- **MSA and SNP Analysis**
- **Gene Tree**
- **Meta-CATS**
- **Proteome Comparison**

Metagenomics Analysis

- **Taxonomic Classification**
- **Metagenomic Binning**
- Metagenomic Read Mapping

Transcriptomics Analysis

- **Expression Import**
- **RNA-Seq Analysis**

Utility Tools

- **ID Mapper**
- **Fastq Utilities**

Services in blue, support bacterial AND viral use cases

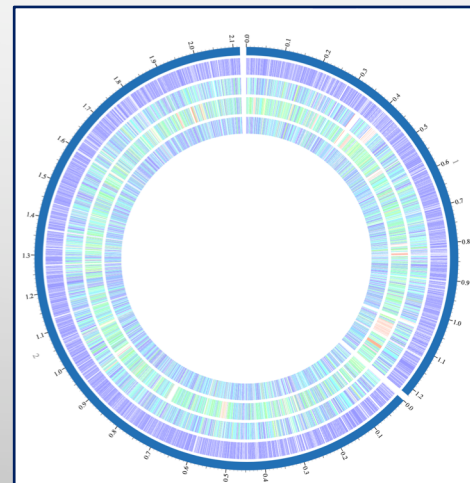

Multiple Sequence Alignment

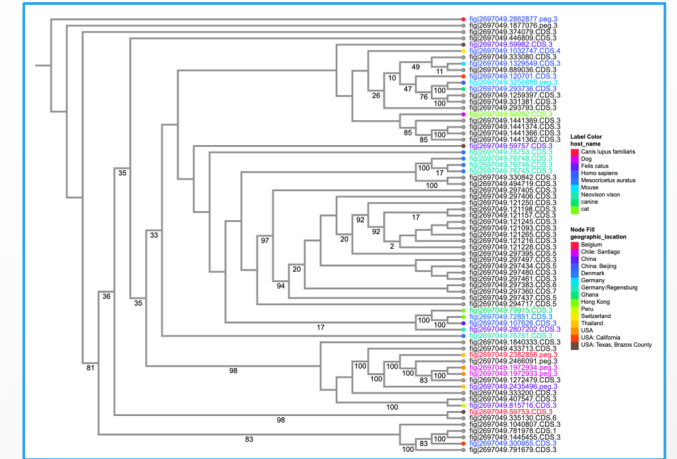

Whole Genome Alignment

Proteome Comparison

Phylogenetic Analysis

Variation Analysis

Transcriptomic Analysis

NEW TOOLS FOR IRD/VIPR USERS

- SARS-COV-2 TOOLS
 - SARS-COV-2 GENOME ASSEMBLY AND ANNOTATION
 - SARS-COV-2 VARIANT TRACKER
- NGS SERVICES:
 - FASTQ UTILITIES
 - DE NOVO ASSEMBLY
- METAGENOMIC
 - TAXONOMIC CLASSIFICATION
 - METAGENOMIC BINNING
- TRANSCRIPTOMICS
 - RNA-SEQ ANALYSIS
 - EXPRESSION IMPORT
- 3-D PROTEIN STRUCTURE VIEWER (NEW)

SARS-CoV-2 Genome Assembly and Annotation

The SARS-CoV-2 Genome Assembly and Annotation Service provides a streamlined "meta-service" that accepts raw reads and performs genome assembly, annotation, and variation analysis. For further explanation, please see the SARS-CoV-2 Genome Assembly and Annotation Service [Quick Reference Guide](#) and [Tutorial](#).

BV-BRC: OUTREACH

- Virtual outreach
 - Online MOOC training courses
 - **5000+ enrolled in Bacterial Bioinformatics (Coursera)**
 - Half-day virtual mini workshops / webinar series
 - **SARS-CoV-2 Outbreak Response (Aug-Dec 2020)**
 - **Respiratory Pathogens (Feb-Jun 2021)**
 - **Tick-borne pathogens (March 2022)**
 - Instructional videos addressing common user questions
 - Social media: Twitter, Facebook, YouTube, and Reddit
- Tutorials and user guides for newly developed tools
- Rapid response to user questions / helpdesk
- Attendance at national meetings
 - Presentations, booths and workshops (ASM Microbe, ASV, GVN)
- Strategic workshops (2-3 per year)
- Publications on new resource functionality

Locations of the 90+ workshops conducted by PATRIC (Blue) and ViPR/IRD (Red) over past 10 years

BACTERIAL AND VIRAL BIOINFORMATICS RESOURCE CENTER

Welcome to the Bacterial and Viral Bioinformatics Resource Center (BV-BRC), an information system designed to support research on bacterial and viral infectious diseases. [Learn more about BV-BRC](#). Introductory material for transitioning PATRIC and IRD/ViPR users is provided in the sections at the bottom of this page.

This is the **Beta Version** of the website, designed to allow users to explore, try out features, and [provide feedback to the BV-BRC team](#).

ORTHONAIROVIRUS GENOME & PROTEOME

Nucleoprotein (N): Structural virion protein (60–68 kD). Component of the RNP inside virions. Oligomerizes and encapsidates orthonairoviral genomic segments. Functions as an exoribonuclease.

Glycoprotein (GP): Structural virion protein consisting of two subunits (G_N 30–45 kD, G_C 72–84 kD). Produced via proteolytic cleavage from the GPC precursor. Inserts into virion membranes as GP spikes composed of G_N and G_C . As a putative class I fusion protein, GP mediates cell-surface and internal receptor binding, virion-cell membrane fusion and, thereby cell entry.

Large protein (L): Structural virion protein (250–450 kD) with RdRP, helicase, and endoribonuclease domains. Component of the RNP inside virions. Oligomerizes and mediates transcription and replication of orthonairoviral RNA segments. Mediates cap-snatching for viral mRNA capping.

THREE USE CASES

- 1) FINDING SPECIFIC MUTATION IN CRIMEAN CONGO HEMORRHAGIC FEVER VIRUS (CCHF) REPORTED IN THE LITERATURE
 - [SEARCH](#), ASSEMBLE, AND CURATE RELEVANT DATASETS
 - CREATE [MSA](#) TO VERIFY AND LOOK FOR OTHER GENOMES
 - [VISUALIZE](#) RELATED DATA (3D PROTEIN STRUCTURES)

- 2) IDENTIFY SEQUENCE VARIATIONS IN CCHF THAT CORRELATE WITH HOST RANGE AND GEOGRAPHIC LOCATION
 - [SEARCH](#), ASSEMBLE, AND CURATE DATASETS
 - CREATE [MSA](#) TO VERIFY AND LOOK FOR OTHER GENOMES
 - [PHYLOGENETIC](#) ANALYSIS TO REVEAL CORRELATION PATTERNS
 - USE [METACATS](#) TO SEARCH FOR HOST- OR LOCATION-SPECIFIC SITES

- 3) ISOLATION AND CHARACTERIZATION OF AN “UNKNOWN” NAIROVIRUS.
 - SRA FILE ANALYSIS ([TAXONOMIC CLASSIFIER](#))
 - READ QC AND MAPPING ([FASTQ UTILS](#))
 - *DE NOVO* SEQUENCE ASSEMBLY ([ASSEMBLY](#))
 - BLAST AGAINST VIRAL DATABASE ([BLAST](#))
 - ANNOTATE MY GENOME ([ANNOTATION](#))

A single mutation in Crimean–Congo hemorrhagic fever virus discovered in ticks impairs infectivity in human cells

Brian L Hua¹, Florine Em Scholte¹, Valerie Ohlendorf^{2 3}, Anne Kopp^{2 3}, Marco Marklewitz^{2 3}, Christian Drosten^{2 3}, Stuart T Nichol¹, Christina Spiropoulou^{# 1}, Sandra Junglen^{# 2 3}, Éric Bergeron^{# 1}

- single amino acid change appears to make the virus less able to infect human cells
- mutation prevents viral-cell (human) fusion step
- may explain why this strain and others in the Europe 2 group do not cause severe human disease

Strain names:

ref seq: [IbAr10200](#)

mutant: [Malko Tarnovo-BG2012-T1303 \(MT-1303\)](#)

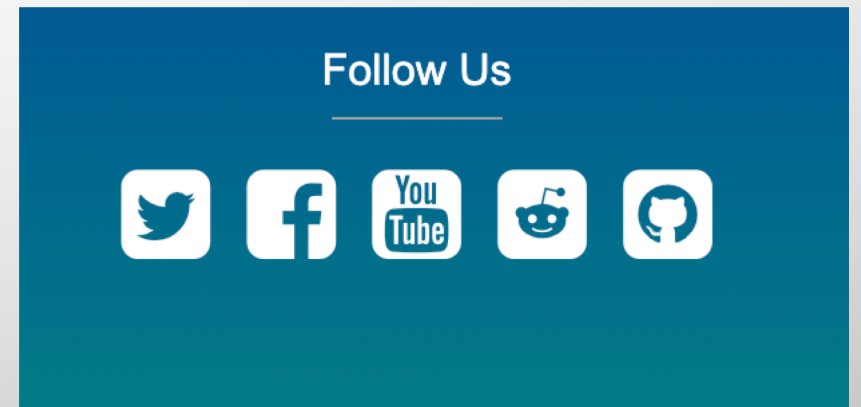

Mutation:

[R1116G](#)
